

**REMARKS**

The foregoing amendments are being made to further clarify the features of the invention. Claims 7, 8 and 13 recite that the photographing apparatus switches between a reproduction mode and a photographing mode, which is different from the function performed by button 177 of the Bullock patent. Claim 9 recites that the display of the image processing apparatus, e.g. PC, displays a window showing the photographing apparatus and a power indicator, and that this window is minimized when the power to the photographing apparatus is turned off via the indicator. Claims 11, 14 and 15 recite that the minimization results in the display of an iconic representation.

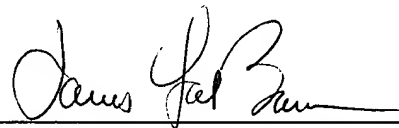

Favorable consideration is respectfully requested.

Respectfully submitted,

BURNS, DOANE, SWECKER & MATHIS, L.L.P.
